

$\text{Cu}_2\text{O}/\text{Cu}_x\text{S}$  THIN FILM SOLAR CELLS USING  
ELECTRODEPOSITED  $\text{Cu}_2\text{O}$  FILMS

Photovoltaic properties of  $\text{Cu}_2\text{O}/\text{Cu}_x\text{S}$  thin film solar cells, fabricated using electrodeposited  $\text{Cu}_2\text{O}$  films, were investigated as a function of heat treatment. The photocurrent-potential behaviour of electrodeposited  $\text{Cu}_2\text{O}$  films in a photo-electrochemical cell was also investigated. This investigation reveals that the efficiency of the  $\text{Cu}_2\text{O}/\text{Cu}_x\text{S}$  solar cells is very sensitive to the heat treatment and it can be improved significantly using this method of heat treatment. We have obtained the maximum values of  $V_{\text{OC}} = 300 \text{ mV}$  and  $I_{\text{SC}} = 0.35 \text{ mA/cm}^2$  under AM1 artificial illumination. The aging of the cell was also investigated.
